HUG

Anti dezincification alloy with low lead release.

It was created to contain the release of lead in water destined for human consumption to a minimum. Arsenic and aluminum also significantly reduce dezincification. Good hot plastic deformability. Good workability characteristics for chip removal. Complies with the requirements of 4MS, replaces the CW602N for contact with drinking water.

NAME OF ALLOY

UNI EN: CW625N - CuZn35Pb1.5AlAs

CHEMICAL COMPOSITION UNI EN 12164 ED.2016

Cu	Pb	Sn	Fe	Ni	Al	Mn	As	Zn	Other elements

Elements not listed must be ≤0.02 %.

Group of restriction of the surface in contact with drinking water: B,D.

HEAT TREATMENTS

SOLUBILIZATION OF RESIDUAL β PHASE

To improve the corrosion resistance of the alloy a thermal treatment between 500°C and 550°C for 2 hours with cooling outside the furnace is required. This treatment after hot stamping enhances the solubilization of the residual beta phase to grant material resistant to dezincification.

The omission of this treatment impairs the anti-dezincification performance that the material is designed for.

STRESS RELIEVING

Enables the redistribution of tensions induced by mechanical processing or cold plastic deformation reducing the risk of stress corrosion cracking.

The treatment consists of heating the items to 200°C - 250°C for 2 hours and cooling within the furnace.

The validation of the stress relieving treatment can be performed with the ISO 6957 test.
