LFB CW510L

Certified to NSF/ANSI 372

Alloy with low lead content and optimised machinability.

Alloy with lead content less than 0.2% uses in the US market for which it is NSF372 certified. Good machinability due to chip removal makes LFB the standard alloy among materials with reduced lead content. Inserted in the 4MS "Positive List" it is used in the parts used in contact with drinking water.

NAME OF ALLOY

UNI EN: CW510L - CuZn42 | **ASTM:** C28500

CHEMICAL COMPOSITION UNI EN 12164:2024

*Limitation according 4MS. Elements not listed must be ≤0.02 %.
Group of restriction of the surface in contact with drinking water: B,D.

HEAT TREATMENTS

STRESS RELIEVING

Enables the redistribution of tensions induced by mechanical processing of cold plastic deformation, reducing the risk of stress corrosion cracking.
The treatment consists of heating the items to 200°C - 250°C for 2 hours and cooling within the furnace. The validation of the stress relieving treatment can be performed with the ISO 6957 test.

ANNEALING

Re-crystallizes the alloy, reducing its hardness and increasing its ductility.
The temperature of the treatment varies from 450°C to 550°C for an amount of time relative to the required results. The high temperature can induce changes in the surface appearance and in the tolerance of the finished part.

*the hardness value is determined in the mid-range
The values in brackets refer to the hexagonal section bar.
The standard condition produced by Almag is R500 for Ø ≤ 39 or H135 for hardness and R430 from Ø > 39 for Rm, or H110 for hardness.
Any other conditions must be requested when ordering - subject to feasibility request.
